## Appendix E Superseded Policies

The following policies from the existing local plans are to be replaced by Minerals and Waste Policies and Sites Policies:

Local Plan Policy	Policies and Sites DPD Policy
<b>Darlington (Borough of Darlington Local Plan):</b>	
E24.4: Conservation of Land and other Resources (consumer waste collection points)	MWP1, MWP12
S14: Recycling facilities	MWP12
EP17: Waste material storage, processing and transfer	MWP12
<b>Hartlepool (Hartlepool Local Plan):</b>	
Was1: Major Waste Producing Developments	MWP1
Was2: Provision of 'Bring' Recycling Facilities	MWP12
Was3: Composting	MWP3, MWP11 (plus MWC6 and MWC7 of the Minerals and Waste Core Strategy DPD)
<b>Middlesbrough (Middlesbrough Local Plan):</b>	
No adopted policies are being superseded	
<b>Redcar and Cleveland (Redcar and Cleveland Local Plan):</b>	
No adopted policies are being superseded	
<b>Stockton-on-Tees (Stockton-on-Tees Local Plan):</b>	
No adopted policies are being superseded	

## Appendix F

### Glossary

Aggregates	Minerals that are used in construction processes such as concrete manufacture and road making.
Biological treatment	The treatment of appropriate wastes by biological methods such as composting or anaerobic digestion, where waste is broken down to natural, organic components.
Bring site	A site where the public can deposit waste items for recycling or re-use. Usually refers to a collection of storage bins found in car parks to encourage people already using these car parks to also utilise the recycling bins.
Commercial and industrial waste	Waste which is produced from commercial companies, such as shops and banks, and from industrial processes such as manufacturing.
Composting	The controlled decomposition of plant life to form compost, which can then be used to improve existing soils, or as soil replacement itself.
Construction and demolition waste	Waste that arises from construction activities like building works, and from the demolition of buildings and structures.
Development control:	The process undertaken by local authorities where they make decisions on whether to approve or refuse planning applications. Also known as development management
Development Plan Documents (DPDs)	The documents within a Local Development Framework which outline how planning will be managed in a particular area.
Disposal	When waste is managed without any value being recovered from the waste, normally through landfill.
Eco-park	A name given to a cluster of businesses, including waste management facilities, which are located adjacent to each other and whose operations are related in terms of the materials they accept/produce.
Energy from Waste	The name given to the energy recovery process where waste materials are used as fuel to generate electricity.
Energy recovery	Waste, or by products from the processing of waste, are used as a fuel to generate heat or electricity.
Habitats Regulations Assessment:	Also known as Appropriate Assessment. An appraisal of a document to determine its effect on European level sites of nature importance.
Hazardous waste	Waste which has specific properties which make it dangerous or harmful to human health or the environment.
Heat treatment:	The treatment of waste by heating, which alters the properties of the waste materials, and produces materials which can then be recycled, re-used or are more suitable for further treatment.
Household waste recycling centre	Formerly known as Civic Amenity sites. A facility where residents of an area can deposit waste, which is then sent for re-use, recycling, composting etc.
Joint Municipal Waste Management Strategy	Joint Municipal Waste Management Strategy; a management strategy focusing on waste collected by or on behalf the five Borough Councils in the Tees Valley.

Landfill	Where waste is disposed of by burial in the ground. Traditionally the most popular method of waste management in the UK.
Large waste management sites	In this DPD, large waste management sites are considered to be those over 1 hectare in size and which deal with at least 25,000 tonnes of waste per annum. Can include sites containing clusters of facilities.
Local Development Framework (LDF)	A folder of documents which outlines how planning will be managed in a particular area.
Local Development Scheme (LDS)	Sets out what documents will be included in a Local Development Framework, and when they will be produced.
Major developments	For the purpose of this DPD, major developments include residential schemes comprising 10 or more dwellings, and other developments with a floorspace of at least 1000 square metres or where 0.5 hectares or more land will be developed.
Mechanical sorting	The sorting of mixed waste streams by mechanical methods to allow the different materials to be sent for appropriate treatment or processing.
Municipal solid waste	Waste which is collected by local authorities and can include wastes from households, public litter bins and household waste recycling centres.
Physio-chemical treatment	The treatment of wastes using a combination of physical (eg filtration, air stripping) and chemical methods (eg chlorination, ozonation).
Plasma destruction	The treatment of waste by plasma, which involves heating to very high temperatures (up to 6,000 degrees Celsius) where all materials will 'melt' down to form a non-toxic residue.
Reclamation	The process of restoring land following development (restoration) and the management of the restored land (aftercare).
Recovery (of value)	The management of waste in a way which recovers value from the waste. Recovery incorporates re-use, recycling, composting and energy recovery. In this instance the term does not provide any implications in terms of the efficiency of energy produced.
Recycling	The processing of materials found within waste streams into another form, which can then be used for a beneficial use.
Restoration	The process of restoring developed land to its original state, or to another beneficial use.
Re-use	Where materials found in waste streams are re-used without the need for them to be re-processed into another form.
Separation / recovery	The separation of different waste streams to recover materials for treatment or processing.
Small waste management sites	Waste management sites which are generally under 1 hectare in size and deal with less than 25,000 tonnes per annum.
Soil washing	The processing of contaminated soils to provide clean, usable soil materials.
Sustainability appraisal	An appraisal of a document throughout its production process, which determines how sustainable it is, and how it could be made more sustainable.

---

Tees Valley	The southern part of the North East region, consisting of the Boroughs of Darlington, Hartlepool, Middlesbrough, Redcar & Cleveland and Stockton.
Tees Valley Joint Strategy Unit (JSU)	Now known as Tees Valley Unlimited
Tees Valley Unlimited	An organisation which works with the five local authorities of the Tees Valley on strategic issues which have relevance across the whole area. Previously known as the Tees Valley Joint Strategy Unit.
Thermal desorption	Similar process to heat treatment, in that waste materials are heated so that contaminants can be removed from other materials which can then be re-used or recycled.
Waste audit:	Details how the waste arising during the life of a development will be managed.
Waste minimisation	Where the amount of waste produced from a specific source is minimised. The need to manage this waste is therefore reduced.
Waste Management Strategy	Provides details on how waste will be managed in a particular area over a set period of time.
